mats.skaranger@iiote.io

**iiote has recruited Mats Skaränger as Regional Manager North Sweden. Mats strengthens the team with solid technical knowledge after studies at Luleå University of Technology and extensive experience from IT, telecom, real estate and building construction services.**

iiote contributes to Sweden's goal to be the best in the world to use the potential of digitalization. To further fulfill and enable this mission iiote has strengthened the team with an additional experienced engineer with solid building construction skills and IoT passion.

Robert Spertina CEO at iiote says "After many years of previous cooperation with Mats I'm convinced that Mats industry knowledge and his strategic location in Sundsvall gives us a unique opportunity to grow our business in a very large geographical with equal need of digitalization as for the rest of Sweden. Mats will add important skills to the team that are based on a multitude of experiences gained from both the IT/Telecom and building construction industry."

"I clearly see that the multiple IoT solutions iiote has on offering with several existing implementations and coming IoT Solutions provide great benefits for the society with potentially very large cost savings. Repair of damages caused by water leakage in kitchens, WC/baths, cellars and attics resulting in mold are very costly and inconvenient for the tenant. I recommend customers to take part of the reports and statistics compiled and published annually by 'Vattenskadecentrum', with input from all insurance companies and industry experts, that state that the cost caused by water exceeds 16 000 000 Swedish kronor daily! I'm very excited to be part of and help grow iiote solutions now that LPWAN is a here for real and in place in many locations in Sweden and growing every day" says Mats Skaränger.

iiote wishes Mats a warm welcome to the team!

iiote - make sense of IoT

## About iiote AB

**iiote** work with companies, organizations and municipalities in implementing IoT in their business, from analysis need and strategy to planning, implementation and system integration. iiote has expertise in IoT, IT and Telecom, combined with industry-specific skills from the construction, machinery and automotive industries. iiote integrates solutions that drive the development of simple and innovative IoT in the community. This is enabled by radio systems that use low-energy technology, Low Power Wide Area Networks (LPWAN).
